TECH CMS

CONTENT MANAGEMENT SYSTEM WEBSITE

With the explosive growth of Internet as information tool and websites as a marketing and publishing tool today businesses require to use their website effectively to market themselves to global industry. No longer can information be published online in a manual process using static website and be left unattended with same information for years. Online information must be continually reviewed and updated by content editors so that other content consumers, including customers and search engines, have access to the most up-to-date version.

Techjet Solutions combines the performance of professional Content Management Tools with an attractive, intuitive, professional user interface into TECH CMS to built dynamic websites and web portals with CMS (Content Management System) developed using PHP/MySQL Technology.

TECH CMS brings powerful tools by which you can create "N" number of pages and continuously edit your rich text content to provide up-to-date information of your business to your visitors i.e. customers, partners, vendors, employees and most important your prospective customer. Also provide information regarding various achievements and up coming occasion to your visitors through News and Events section. Visitors can quickly contact you through enquiry manager thus enabling you to provide faster response to their enquiries. Features include following:

Webpage and Content Manager

- Create 'n' number of web pages and add it to your website
- Edit/Delete/Manage rich text content and images on your web pages
- WYSIWYG editor allowing you to change font type, color etc.
- Archiving content instead of deleting it and hide from visitors

Menu and Banner Manager

- Ability to manage/add new links to top, left and bottom menu
- Add as many images in the banners slideshow as you need
- Link your banners to a particular URL and redirect visitors to that webpage
